

# Solutions for Mining and Power Distribution

**T**rachte Global provides innovative solutions for power, control and communication in the mining and power utility markets. For over 90 years Trachte has been providing solutions through engineered applications across the globe. The specialists at Trachte consistently complete projects on time and help compress difficult project schedules. Integrating electrical equipment into pre-fabricated metal enclosures provides a complete system, fully assembled, wired and tested to function exactly as specified.

Trachte has successful solutions for general mine power applications, mine machinery and utility power transmission and distribution substations. These severe duty applications require rugged equipment with high duty ratings.

The design and application team at Trachte understands these stringent requirements.

All projects are manufactured in a factory registered to ISO 9001:2008 standards. Strict commitment to our quality management system ensures that your project gets completed per all specifications as well as all applicable codes and standards. Our process for quality drives continual improvement in the product at all levels, eliminating the potential for errors that could slow down progress on your project.

**T**rachte engineered applications mean less installation time at the job site, and a fully integrated system means less time required for project check-out. All electrical systems are integrated in the factory, providing a complete system that is tested and operational upon installation at the site.

Trachte is a single source provider of all equipment needed for your demanding project. We provide all scheduling through a dedicated project manager assigned for each project. Trachte engineers work with your team to design a complete system that integrates circuit switching and protection with motor control and communication circuits for connection to SCADA and RTU systems.

For complete engineered systems in a factory fabricated metal enclosed building, Trachte is your quality solutions partner.
